

What fuels are used to generate my electricity?

All energy companies are required to advise their customers about the mix of fuels they use to supply electricity to their customers and the impact it has on the environment.

The table below shows information on electricity that we supplied from 1st April 2017 to 31st March 2018.

| Fuel Mix Disclosure label (relates to electricity supplied in the period April 2017 to March 2018) | | |
|--|----------------------|-------------------------------------|
| Electricity supplied has been sourced from the following fuels: | % of total | |
| | Electricity Supplied | Average for the UK (for comparison) |
| Coal | 11.8% | 7.6% |
| Natural Gas | 62.6% | 41.2% |
| Nuclear | 19.0% | 20.0% |
| Renewables | 2.6 % | 29.0% |
| Other Fuels | 4.0% | 2.1% |
| Total | 100.0% | 100.0% |
| Environmental Impact | | |
| CO ₂ Emissions | 359 g/kWh | 231 g/kWh |
| High Level Radioactive Waste | 0.00133 g/kWh | 0.0014 g/kWh |

*Having launched our Green Tariffs in July 2018, next years FMD figures will reflect this and show an increase in the proportion of energy sourced from renewable sources.
